TALENT MANAGEMENT OF ACADEMIC STAFF OF PRIVATE COLLEGES AT HIGHER EDUCATION - A CONCEPTUAL STUDY

Sheetal V. Hukkeri,
Vigyat Jain,
Pawan Kalyan

Abstract

Purpose - This study aims to demonstrate how talent management results as a unique organizational mechanism in private college at Higher Education, that influences knowledge management, university transformation, and the intellectual climate in higher education.

Methodology/Approach – The desk-based research methodology is used in this review. The research papers are selected from reputable databases and publications, including Google Scholar, Emerald Insight, Scopus, EBSCO, Research Gate, Academia and other organizations' webpages. In this study, over 20 research publications are evaluated.

Findings – through this paper the researchers tried to establish a potential link that might help explain how talent management affects private colleges performance and over time it even acts as a base for their growth and sustainability. Employee development based on management knowledge in universities must become a need in order to provide sustained organizational performance in order to meet this aim.

Novelty/Value - The amount of research on the potential for innovation in talent and knowledge management in private colleges at Indian Higher Education, particularly in terms of improving academic performance, is bolstered by this comprehensive literature review study. The results of talent management and talent evaluations are used to develop talent management from the standpoint of giving a detailed account of each component of performance in private colleges.

Keywords - *"Higher Education", "Talent Management", "Talent Management in Higher Education", "Systematic literature review".*

INTRODUCTION

The second-largest higher education system in the world is found in India, which also ranks second in terms of the worldwide higher education network. When referring to India, the term "higher education" describes the tertiary-level teaching that is offered after 12 years of formal schooling (10 years of primary education and 2 years of secondary education). The number of colleges listed by the UGC under Section 2(f) of the UGC Act 1956 has increased to 12717, and out of these colleges, 10143 colleges are under Section 12B in the higher education sector. There are now 982 universities listed by the UGC under Section 2(f), 3 institutions established under State Legislation, and 12717 colleges overall. According to the UGC annual report for 2020–21, India's higher education ecosystem is made up of 45562 institutions, with 394.34 lakh students enrolled overall. High-quality education is provided by these HEIs.

Assistant Professor, School of commerce, Jain (Deemed to be University).
B.Com (Honors) Students, School of Commerce, Jain Deemed to be University
B.Com (Honors) Students, School of Commerce, Jain Deemed to be University.

The Ministry of Education has overall control over these HEIs.

India's educational establishments are furnished with state-of-the-art facilities, modern libraries, and state-of-the-art classroom equipment (such as smart class, computers, Wi-Fi-connectivity, etc). Overall, these top-notch technologies enable dynamic, 360-degree learning, which is advantageous to the pupils. The Indian Institutes of Technology (IITs), Indian Institute of Science (IISc), National Institutes of Technology (NITs), Indian Institutes of Science Education and Research (IISERs), and Indian Institutes of Management (IIMs) are three Indian institutes that have been highlighted in lists of the best universities in the world because of these distinguishing qualities. This lends credence to the notion that India is developing into a big international and local education hub. Indian higher education has grown significantly over the years because to the combined efforts of governmental and private organisations. The top-notch teaching strategies applied in Indian educational institutions enable students to improve their visualisation abilities and are motivated to think creatively. Throughout their further education, students can improve their speaking, listening, and communication skills. All individuals must have access to higher education, and the Indian government is always trying to make it better. Indian educational institutions spend a lot of time and money organising field trips to actual real-world settings, such industrial places, in order to provide the students with possibilities for experiential learning.

Universities, Colleges, and Courses make up the three layers of the Indian higher education pyramid. To provide consistent education, universities and colleges collaborate with regulatory and accreditation authorities. There are several types of universities which are Central Universities, which were established by a Parliamentary Act, are the most common type of university based on management. Next to State Universities, which are established through an Act in the State Legislature, the establishment and operation are funded by the Union Government. The state government largely supports and runs state universities, whereas private universities are established by an act of the state legislature. It consists of diverse research universities and specialised institutions. Next Deemed Universities which are high-performing institutions that the Central Government, on the recommendation of the Union Grants Commission, has proclaimed to be of same standing with universities (UGC). At last, The Institutes of National Importance (INI) which are prestigious educational institutes in India that are renowned for producing highly qualified workers. All the IITs, NITs, and AIIMs institutions are supported by the Indian government.

Despite being repeatedly demonstrated as being important and providing the institution with a competitive edge, talent management is still a relatively undeveloped and new topic in the realm of human resource management for many organisations. The strategies for talent management that are used in the higher education system to support them and their efficacy are not known to the institutions. Businesses and industries are concerned about the talent needed to distinguish out in today's cutthroat marketplace. For every 50th job in the business, there is a 25% variation in the attrition rate, which causes the organisation to spend $1 million on hiring new employees. The role of talent management in corporate human resources is rising. Resource management, which states that developing talent rather than finding and employing talent from outside is more profitable and practical. Lewis and Heckman (2006) state that there are three main definitions of talent management: 1) the collection of HR department practises, 2) the movement of HR within the firm, and 3) the recognition, sourcing, and development of employee talent. The well-being of the business depends greatly on nurturing and utilising the talent management asset for ongoing growth, and it is just as vital for those working in the education sector as it is for those working in the corporate sector. Talent management is described in Gay and Sims' (2006) work as promoting career advancement development of highly talented and skilful persons using organised resources, methods, procedures and regulations. The expansion of the education sector is utterly dependent on the variety of workers that are retained as professors. The faculty is responsible for establishing the institution's future image and tone. As a result, finding the suitable staff to hire presents a difficulty for

educational institutions, and excessive employee turnover poses a serious danger to businesses. The purpose of the study is to review the talent management practises used by institutions and identify factors that influence faculty members to remain in the organisation. The sudden loss of faculty has a negative impact on ongoing academic plans, which leads to most institutions failing to support managerial staff for the skill.

Shah, Memon, and Tunio (2021) have outlined several crucial talent management strategies that can aid in the growth or improvement of institutions. 1) Attracting Talent - Organizations have a variety of strategies for attracting a talented pool, but recruiting and selection are one of the outlined methods for attracting a competent pool of candidates who will serve as the organization's strength to help it achieve its goals and be successful. 2) Learning and Development - For workers to retain their excellent performance in the cutthroat environment of business companies, learning and development is a crucial step. The ability of an organisation to adapt to a constantly changing environment is also essential for success (Rabbi et al., 2015). 3)Talent Retention - it was further mentioned that in order to keep brilliant individuals, businesses must provide them highly alluring remuneration packages in exchange for their contributions to the achievement of the company's objectives. Because fulfilling objectives successfully implies that firms may offer staff alluring reward packages.

OBJECTIVES OF THE STUDY

- To investigate how the standards of private universities' educational offerings are impacted by talent management techniques.
- To research how talent management methods affect different factors, including training and development, hiring, firing, employee empowerment, staff training, etc.

RELEVANCE OF THE STUDY

This literature review clarifies the state of the art in talent management for higher education in private colleges. This review's objective is to assess the trends in talent management in relation to private colleges, using the body of literature already available. It aids the researchers to determine the most recent developments in talent management and their associated practices research and the potential for long-term higher education in private colleges. For the staff since it gives a quick overview of the current talent management need, and the areas that are not already covered by talent management practices.

LITRATURE REVIEW

By Gerhardt, T., & Karsan, S. (2022), There was no expectation that the academic staff at this private university would actively engage in research and publication, and the majority of them were motivated by internal factors. However, among the senior academics surveyed, bibliometrics was a top concern. Senior academics' reported lack of talent management in bibliometric profiles impedes academic advancement and may serve as a push factor for high turnover intentions. In general, management's clear talent management methods went unnoticed. **By Rout, M., & Satpathy, B. (2020),** It explains that institutions are concentrating on how to cultivate and retain talent. Retaining top talent is not just a management objective, but also a need for institutions that are in danger of going through a talent crisis. Benefits, inviting workplaces, spouse employment opportunities, start-up and resources, as well as income, are important elements that influence teacher recruitment and retention. According to the findings of this study, talent management in organisations may significantly aid in finding the best talent, nurturing that talent, and keeping that talent inside the organisation for its success and growth. Several tactics for luring and keeping the greatest talent are provided by this research for universities to adopt. **By Ramaditya, M., Maarif, M. S., Affandi, M. J., & Sukmawati, A. (2022),** That was discovered. A potential link that could help explain how knowledge

management affects private colleges' organizational performance over time is talent development. Employee development based on management knowledge in universities must become a requirement in order to provide sustained organizational performance in order to meet this goal. **By Selvanathan, M., Surendran, N. N., Arumugam, T., Subramaniam, S. J., & Yusof, N. M. (2019)** In the teaching and career development of university lecturers, talent management has been a constant focus. This efficient method, however, depends on how certain organizational constituents behave. The effectiveness of lectures, company culture, and retention policies are some of the crucial elements that go into talent management in a business. In order to understand the link between talent management and these three antecedent factors—performance, organizational culture, and retention—this research made a significant contribution. It's significant that the research concentrates on academics who teach courses connected to information technology. The top colleges in Malaysia frequently lose capable academics, which leaves a void in the organizational results. Consequently, respondents were drawn from a sample of private higher education institutions in Kuala Lumpur. **By Taamneh, A. M., Taamneh, M., Alsaad, A., & Al-Okaily, M. (2021),** The findings demonstrate a modest difference in TM practices between public and private colleges. With the exception of performance management, public institutions exhibit a greater degree of TM practices than do private colleges. Public and private institutions do have distinct variances in TM practices, but these variations were not statistically significant. On the other hand, we found a big gap between private and public colleges in terms of reflective or process-oriented activities. The findings indicate that as compared to private institutions, HR departments at public universities are more likely to have less control over the recruiting and selection processes. We also analyzed how much prominent professors at public colleges choose applicants who align with their own personal ideologies. **By Bello, Z., & Alhyasat, W. (2020).** Employees' emotional success in relation to given tasks in a learning environment is referred to as job satisfaction. They are those transient happenings. It can cause workers to reexamine their commitment to their jobs and the business as a whole. 2012's (Karim and Rehman). Additionally, job satisfaction is the subjective evaluation of personal experiences and job duties. The problem of managing human resources in a company is one such topic that satisfaction at work. This is due to the importance of employee health and well-being to determining whether a work is satisfying It has been said that employees' continuing loyalty to their company is a result of their sense of satisfaction. with the work, which is clear by their output. **By Annakis, J., & Esposto, A. (2000),** According to Jantan et al. (2009), talent management is the result of Make sure the proper person is doing the right task; follow these steps to guarantee consistency in leadership in important roles, and foster personal growth and the choice to in order to control the flow, demand, and supply of talent human capital generator the talent administration procedure include identifying the important skill areas. Identifying the individuals within an organization those inside the organization who are its main talent, and implementing talent development activities pool to keep and enlist them, and is then prepared to assume more important roles. **By Musakuro, R. N., & de Klerk, F. (2021),** We discovered that the chosen HEI's talent management in private colleges procedures were being adversely impacted by workforce planning, remuneration and incentives, training and development, succession planning, recruiting, selection, and performance management. As per the study conducted by **Karodia, M. Y. (2016),** Business agendas are centered on talent management, an integrated system of acquiring, fostering, and retaining the necessary human capital at all organizational levels. Talent management is anticipated to continue being a business necessity given the skills shortage in South Africa. The significance of talent management is derived from its function in achieving competitive advantage in order to realize the organization's strategy. Academic institutions that adopt talent management strategies to combat issues that the business world faces can achieve the same results. Rising demand for highly talented people is a result of the complexity of global business, expanding emerging market economies, and constantly shifting business conditions. Investigating talent management practices and strategies is the goal of this research project. **By Malokani, D. K. A. K., Lashari, A. K., & Inayat, A. (2022),** The purpose of this study was to analyze how talent management strategies affected online recruitment in Karachi's private higher education institutions. However, the traditional hiring process is used in private colleges, which results in higher costs, more time, and a

lack of competitive candidates for open positions. The primary information, which was gathered in printed form from prospective applicants who planned to submit job applications in the future to private higher education institutions in Karachi, Pakistan, was used to test the developed hypothesis. Three independent variables, including talent identification, development, and retention, as well as one dependent variable, e-recruitment, are measured using a questionnaire adapted from previous studies. Multiple regression analysis and reliability analysis were carried out for analysis. **By Mukwawaya, O. Z., Proches, C. G., & Green, P. (2022),** Dr. Nabi Bux (N. A. Baloch, 1917–2011) was one of Pakistan's most notable figures. Great thinker, educator, scholar, researcher, and author of numerous scholarly books, he was all of these things. Islamic studies, Sindhi Civilization and Culture, Education, History, Archeology, Musicology, Anthropology, and Folklore are just a few of the fields in which he made outstanding contributions. His writings are available in English, Arabic, Persian, Arabic, Sindhi, and Urdu. His assistance to Sindh has been invaluable. He made an effort to resurrect Sindh's ancient and folk literature. Exploring the ancient manuscripts of Sindhi scholars from the many libraries around the world was one of his top priorities. He was awarded the Tamgha-e-Imtiaz (1968), Sitara-e-Quaid-i-Azam, and other honors because he is regarded as Pakistan's preeminent educator, thinker, and historian. **By Mabonga, G. N. (2013),** The use of established procedures, tools, policies, and processes in talent management helps the organization's highly gifted and skilled employees develop and advance in their careers. The TM process focuses on creating future leaders and workers. of the business. The manner in which personnel are managed and developed at work has changed during the previous ten years. becoming acknowledged as one of the main drivers of progress in organizational effectiveness (BQF 1998; Marching ton and Wilkson 1997; Phillips 1997). Popular expressions like "people are our most important resource" reflect this. asset" It is recognized from the assessment of the literature that Successful businesses all adhere to the core principle of valuing and funding employees. Maguire 1995; Anand 1997. **Ardyanfitri, H., & Wahyuningtyas, R. (2018),** The key component of talent management includes acquiring people via procurement and orientation; developing talent through training; and managing top achievers at all levels of the company. Talent retention via career planning and succession, performance management, learning, and evaluations, Organizing and maintaining the talent In order to draw in and keep talent, Companies need to understand the required talent, thus they should implement an incentive scheme. According to the requirements of skill. According to Maslow in Bethke-Langenegger et al. (2011):7. Finding the appropriate individuals and having a dedicated program to keep them in the organization improves the caliber and qualification of their job. levels. Additionally, because they belong to an exclusive group of employees, skill. **By Bagul, D. B,** There is a lot of study on this subject, contentment with one's job. Several summaries of recent literature are provided below. As suggested by Inegbedion et al. (2020), the investigation on how people perceive their workload work-life balance and employee happiness organizations. It made an effort to determine how much the workload as perceived by which employee the influence of balance on occupational happiness. 764 randomly chosen staff from 8 global companies two private colleges, organizations, and Nigeria took part in the research. Structural Equation-based modeling was used. the findings that assessment of workload in relation to those of union with their partners' and workers' jobs skills collectively affect their impression of employment happiness and workload balance, Association staff size affects public impression comparison of employee perception and workload balance the influence of workload balance on employment. **By Purwaningsih, D. (2018),** The purpose of this study is to ascertain how Talent Management (TM) affects higher education student performance. Selection, retention, training, incentives, development, succession planning, and career management are the seven key success aspects of TM in respect to students at both public and private colleges. A descriptive and exploratory survey was the study methodology employed. Students from several universities in Indonesia, primarily in Jakarta, were given the questionnaires at random. Validity and reliability tests, as well as regression analysis, were carried out using SPSS 23 software. The study's findings confirm the assumptions that there are substantial correlations between TM and academic success. **By Zengeya, T. M. (2020),** The purpose of this study was to look at the role that talent management procedures had in keeping brilliant academics at the National University of Lesotho. The study was influenced by the social theory of Pierre Bourdieu and the equity theory of Michael Armstrong. At order to promote talent retention

in universities, talent management methods were designed and put into practice using the insights provided by Bourdieu's thesis on the different types of capital. In order to retain talent in the face of intense competition for talent on the job market, talent management strategies were also utilized to inform how to bring balance between the various types of capital and the outputs or incentives.

RESEARCH GAP

Utilizing secondary data, we conducted our investigation. Research Despite the fact that it could seem like a time and money-saving move, it's important to examine the data's validity and source. To put it another way, a disadvantage may be that the source is questionable, which would make your own investigation's results less reliable. Precaution must be used while using secondary data that has already been collected. Researchers may discover that out-of-date information is only marginally useful while doing study in industries and markets that change fast. An fascinating study is sometimes simply a "teaser," a scientist will often learn. The public is given access to a very tiny percentage of the study in this case. The researcher will obviously need to read the complete report to fill in the blanks, but the publisher may charge a fee to provide them access. Before contemplating the use of secondary data, it is imperative to confirm that data are accessible on the subject, target audience, or factors of your choosing. If secondary data is unrelated to your needs, primary data must be used despite its limitations. Secondary data might be alluring, but there is a danger that the quantity and quality won't meet your study objectives.

METHOD

In this study the researchers have secondary sources to collect the information which was already been collected through primary sources and made readily available for researchers to use for their own research. These articles or research papers were found in google scholars and shodhaganga and other websites with keywords "Higher Education", "Talent Management", "Talent Management in Higher Education". The content was analysed and our own review had been added in Microsoft Word. Nearly 25 articles were reviewed to make this research paper.

RESULT AND DISCUSSION

The subsequent step was carried out after collecting 25 items. In the Scopus search results research, the papers by year, the documents by source title, and the documents by nation were examined. The management of talent is essential for achieving goals related to knowledge growth, such as encouraging knowledge creation and exchange. With the growing acceptance of talent management in private schools, organisational knowledge in a setting where higher education is applied, which essentially enables it to become a learning organisation, may realise a competitive advantage in delivering sustainable organisational performance. Sharing effective employee knowledge will improve talent management processes. So talent management strategies raise the standard of instruction at private universities.

The evolution of private universities' organizational performance. In order to attain this aim, it is necessary to provide sustained organizational performance through staff development based on management knowledge in universities. Moreover, knowledge management because of its crucial role in decision-making, it helps establish organizational strategy. These all depend on talent management procedures.

Strategies for talent management affect organizational performance. Additionally, training and development, awards, and recognition are talent management techniques that have an impact on HEIs. There is some literature on talent management and Organizational performance and retention attempt to highlight the numerous connections between talent management and organizational effectiveness A successful talent management

approach major impact on the performance of the organisation Focused talent management the activities of social capital creation are favourably correlated with orgsnisations success.

CONCLUSION

The National Education Policy suggests a 4-year undergraduate curriculum leading to a multidisciplinary bachelor's degree with a variety of exit alternatives. These will be implemented as follows, and they will encompass professional and vocational fields: a diploma following one year of study, upon completing two years of studies, a diploma, after completing a 3-year programme, a Bachelor's degree a four-year Bachelor's degree in many disciplines. As a result of this new policy, private universities must provide quality education with quality faculty or risk losing students as the new education policy has provided alternatives for students to discontinue their studies if they are not satisfied with college faculties. It forces all private universities to hire talented faculty in order to provide quality education and remain competitive.

We may infer from the study above that talent management in organisations can significantly aid in locating the best skill, cultivating that skill, and sustaining that talent inside the organisation for the success and growth of the organisation. Accordingly, we might conclude that controlling the organization's talent will result in development and progress. Additionally, it is concluded that implementing talent management strategies in educational institutions will aid in the faculty's identification of the core competencies necessary for the job description. This will aid in management by assisting in the recruitment and selection of the most effective employees based on the appropriate competencies, which will result in matching the right job to the right candidate.
